Abstract: *this article is devoted to the role of innovative technologies in the process of teaching and learning English. The article also shows some teaching strategies in learning the English language.*

Keywords: *Innovative technology, pedagogical skill, modern strategies, rate of education, teaching system, English atmosphere.*

High development of the English language around the world, this foreign language is considered by different nations as a key to communicate. At present time English has a great role in all spheres of life, as well in education. That is to say, knowing the English language opens the door of chance widely.

Most people want to learn any language easily. This article describes some advantages of innovative technologies which help people learn English well. Well, how innovative technology helps us to develop our English knowledge?

The role of technology is very important in our century. For example: when people able to communicate with their friends, book something, pay bills and aware of news within less time without difficulties, they could do their jobs well and easily.

Nowadays technological advances are very essential into not only business but also educational system. In addition, modern teachers and learners have several opportunities to communicate each other efficiently while doing another job.

According to the research of Professor Chirac Patel [1, p. 117] innovative technologies provide both teachers and universities' students with opportunities which help to develop English perfectly. The professor showed the following advantages in the process of teaching and learning the English language.

They are:

– ***To encourage students' interest and motivation in learning process:***

Nowadays traditional teaching methods are not popular while innovative technology consisting audio, visual animation effects. Besides, innovative technology offers an atmosphere which greatly encourages students' interest in learning process.

– ***To help students to develop communication ability:***

This method motivates students' feelings in learning and provides the students greater thoughts. This strategy offer activities as debates and group discussion which help students to develop working together skill.

– ***To improve effect of teaching system:***

Innovative teachings help teachers to make the best class efficiency. For example, large classes, many students it is difficult for the students to improve their speaking skill. Innovative technology does not waste time and space, and creates more comfortable environment. Technological equipment is a helper for teachers while making efficient lessons.

– ***To improve an appropriate communication between teacher and learner:***

Developing *interaction* between teachers and students is a basic matter. If during the lessons, students use innovative technologies regularly, they will have different questions. Then they have to communicate with their teachers.

That is to say, the rate of working together grows. If learners are under the control of teachers, they improve their knowledge more easily. As Professor Chirac Patel showed, innovative technologies make lessons lively and interesting.

In addition, Butler-Pascoe & WI burg described some advantages of innovative technologies for developing teaching system.

That is to say, technology:

– *Offers comprehensible field-specific effort and gives facilitates student production;*

– *strengthens intellectual abilities and critical thoughts;*

– *helps to develop communicative activities representative of specific professional or academic environments;*

– *provides modern strategies for language development;*

– *consists of authentic materials from specific professions and disciplines.*

These strategies are very appropriate to grow not only English, but also the rate of education [2, p. 25].

It is true that the aim from using innovative technologies in teaching and learning system is to promote motivation and learning interest which can be an appropriate style to achieve successes in educational sphere.

In conclusion, we can say that modern teaching materials, strategies, and the development of technology help humanity have a further developed educational system over the world.
